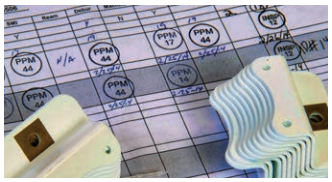
NO COMPROMISES

PPM understands the complex nature of Aerospace & Defense (A&D) requirements. Challenging projects require quality, on-time performance and a managed network of reliable vendors able to meet exacting standards. Our customers can't afford to compromise anything – and with PPM, an **AS9100C Certified Company**, they don't have to.



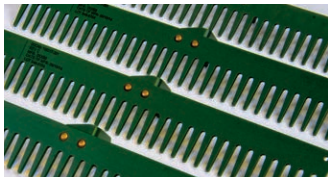
FULL-SERVICE PROJECT MANAGEMENT

PPM's partnerships range from outsourced manufacturing for advanced sheet metal assemblies to quick-turn overflow work for unique projects that just aren't getting done in-house. We can manage your manufacturing from start to finish, or help you turn work rapidly in a pinch. Buyers who need a sure thing without compromises know who to call to get the job done – PPM.

FLAT PATTERN & ASSEMBLY EXPERTS

Specializing in flat pattern development and forming, PPM builds complex aerospace sub-assemblies from start to finish. In-house fabrication of sheet metal parts that are then integrated with composite and machine parts are our core competency.

Project Management · Tooling · Water jet cutting · De-burring · Sheet metal assembly · Light machining · Surface finish processes · Finished assemblies



GO-TO PROVIDER

For the past 15 years, PPM has been the primary source manufacturer of advanced inlet barrier filtration systems for a major OEM. During that time, PPM has delivered more than 30,000 filters and more than 100,000 detail parts and sub-assemblies. PPM is adept at contracting and integrating vendor-supplied parts into complex sub-assemblies and, of course, inventory control and lot traceability are standard practice.

WATER JET CUTTING

The cold water jet cutting process is versatile and ideal for aerospace, automotive, industrial and marine applications. Multi-layer cuts increase productivity, minimize post-cut finishing and are compatible with many types of materials and manufacturing processes. Water jet cutting is environmentally safe and clean and reduces overall manufacturing time.

PRESS BRAKE FORMING

PPM is an aerospace specialist when it comes to sheet metal forming. We maintain a large variety of press brake tooling and can often form your unique part without expensive additional tool charges.
